

## Comparison of 'Power for Cohort studies' to other public software programs.

Date last tested: 7/11/05

	CI%, n <sub>1</sub> , p <sub>1</sub> , n <sub>2</sub> , p <sub>2</sub>							
Data input	95%, 100, 20%, 200, 10%		95%, 100, 10%, 200, 20%		95, 474, 45%, 255, 35.29%		95, 474, 35.29%, 255, 45%	
software	Power	Power with continuity correction	Power	Power with continuity correction	Power	Power with continuity correction	Power	Power with continuity correction
OpenEpi	67.23%	60.14%	59.21%	52.41%	71.88%	69.11%	72.91%	70.15%
PEPI	65.78%	59.25%	60.09%	52.65%	72.12%	69.32%	72.66%	69.93%
EPI 505	67.1%	59.3	59.1%	52.6%	71.7%	69.2%	72.7%	69.8%

Confidence interval CI; number of exposed 'n<sub>1</sub>'; risk of disease among exposed 'p<sub>1</sub>'; number of non-exposed 'n<sub>2</sub>'; risk of disease among non-exposed 'p<sub>2</sub>'.
